

Study 1a (RPR): Correlation Coefficients with Heart Manikin Scores

Variable

Convergent (R)

Discriminant

Hypothesized Validity

- Convergent
- Convergent (R)
- Discriminant

Errorbars represent 90% (inner tick) and 95% (outer tick) confidence intervals

The vertical dashed lines represent the smallest effect size of interest (SESOI, $|r| = 0.17$)

(R) = Reversed hypothesized association. * = Equivalent to zero. † = Undecided equivalence.
